Professional Experience

Student Researcher (Front-End Developer) | *George Brown College, Toronto* Oct 2025 – May 2026

- Engineered a real-time geospatial dashboard for ThinkWirelessSolutions using Next.js, React, and TypeScript, collaborating with backend developers to integrate live GeoJSON APIs and leveraging the ArcGIS Maps SDK to optimize winter maintenance fleet routing across Toronto.
- Migrated the Whole Women Network platform from a legacy WordPress build to a custom Next.js application, engineering an administrative dashboard and reducing mobile Largest Contentful Paint (LCP) from a critical 8.7s down to 2.3s.

Freelance Full-Stack Developer | *GoodCodeClub, Toronto* Jan 2026 – Apr 2026

- Built the core caregiver marketplace platform using Next.js, React, and Tailwind CSS, developing the responsive UI and API integrations to manage job posting visibility between families and caregivers.
- Developed an end-to-end asynchronous messaging system, constructing a 4-table PostgreSQL relational database schema and Next.js routes, while implementing optimistic UI updates in React to provide immediate, perceived real-time feedback to users.

Website Developer Intern | *Hand Eye Society, Toronto* Jan 2026 – Apr 2026

- Executed a ground-up WordPress rebuild driven by a comprehensive UX audit, redesigning the information architecture to align with brand identity, improve accessibility, and reduce user click depth by up to 3 clicks.
- Diagnosed critical WordPress performance bottlenecks by configuring an SMTP server relay, resolving a severe 30s response time, and boosting overall Lighthouse performance from 69 to 91.

Production Support Manager | *OpenText, Waterloo* Dec 2021 – Mar 2024

- Directed a team of 12 technical support agents, consistently surpassing SLAs and maintaining a 95% CSAT score through active coaching and performance management
- Collaborated with Product and Engineering teams to execute operational enhancements, leveraging customer feedback to drive product improvements and resolve complex escalations.
- Reduced onboarding time by 25% by introducing new technologies and designing a comprehensive training program for 30+ off-site new hires

Product Support Specialist | *OpenText, Waterloo* Sept 2020 – Dec 2021

- Troubleshoot and resolved complex SaaS issues, reproducing software defects in staging environments and authoring technical documentation to assist the engineering team with successful deployments.

Technical Project

Fync Finance (Full-Stack Budgeting Application) | *Next.js, TypeScript, Supabase, Prisma ORM, Tailwind CSS, Plaid API*

- Architected the backend using Supabase and Prisma ORM, integrating Plaid API to sync bank data and engineering a custom rules engine to categorize transactions for personalized budgeting automatically.
- Engineered a type-safe Next.js frontend, implementing complex React state management to support database-backed bulk edits, dynamic transaction recategorization, and real-time over-budget notifications.

Education

George Brown College – Postgraduate Certificate in Web Development April 2026

University of Waterloo – BSc in Honours Science April 2020

Certificates: ITIL V4 (2024), Certified Associate Project Manager (2023)

Skills

Technical: JavaScript, TypeScript, HTML, CSS, SQL, React, Next.js, Node.js, Express.js, Tailwind CSS, Prisma ORM, Supabase, PostgreSQL, Git, Figma, Jira, WordPress

Practices: UX & UI Design, Agile/Scrum, Web Accessibility, RESTful APIs, Responsive Design
